Complete category profiles, available 2019

All 150 labels in alphabetical order; each retains both reporting weights. F = total racial fractionalization; B = between-origin racial heterogeneity. Income F measures home-neighbourhood income-background mixing. All numbers are index points (100 x index), rounded to 0.1.

Shown = cleared numeric aggregate. Withheld = the frozen support rule failed and all three numbers remain null. IDs C001-C150 are stable alphabetical labels for this fixed category roster; they are not ranks, venue identifiers or stable-sample IDs.

The category aggregate content was cleared by the independent decision of 23 October 2026 and adopted by the coordinator. This presentation supersedes the frozen source's earlier staging/no-release wording for that cleared content. Original bytes and status tokens remain unchanged; eligible_provisional is a historical source token, not a new uncertainty or release decision. These new presentation surfaces require coordinator adoption before external delivery.

Origins lacking attributes are excluded and retained origin weights renormalized. F = W + B is an accounting identity, not an additive correlation explanation. Available support does not restore the stable sample, repair common geography or identify within-cell income comparisons, individual traits, actual contact or causal mechanisms.
